Palliative Care Discharge Planning for First Nations and Inuit Patients Returning to Remote Communities

Winnipeg Regional Health Authority (WRHA)

October 2015
Lori Embleton, Program Director
WRHA Palliative Care Program

Dr. Michael Harlos, Medical Director
WRHA Palliative Care Program
Professor & Section Head, Palliative Medicine, University of Manitoba
Disclosure

The presenters have no conflicts of interest to disclose
Objectives

• Describe challenges in planning discharges to remote communities for palliative First Nations and Inuit people

• Describe factors that need to be considered to facilitate discharges for palliative First Nations and Inuit people
About Palliative.info

Please read Legal Notices before using this site.

Palliative.info offers an organized, up-to-date collection of links to palliative care resources on the internet, as well as locally developed palliative care material.

... more info ...

What is Palliative Care? (a personal definition)
Palliative Care is an approach to care which focuses on comfort and quality of life for those affected by life-limiting/life-threatening illness. Its goal is much more than comfort in dying; palliative care is about living, through meticulous attention to control of pain and other symptoms, supporting emotional, spiritual, and cultural needs, and maximizing functional status.
The spectrum of investigations and interventions consistent with a palliative approach is guided by goals of patient and family and by accepted standards of health care, rather than being boundaried by preconceptions of what is or is not "palliative".

Palliative care is comfort-focused care and support for those affected by life-limiting illness – the patient, their family, their health care providers, and particularly in small rural and remote settings, the community.

An anticipated death should be a family and community event with the peripheral support of health care, rather than a medical event with peripheral involvement of family and community.
Manitoba

Health Facilities Legend

- Green circle is 33 Health Centres
- Yellow triangle is 8 Health Offices
- Red box is 22 Nursing Stations
  - Red box with a dot in the middle is 17 fly in only communities
- Black circle is 4 Provincial Nursing Stations
- Red diamond is 2 Federally run hospitals
  - Norway House
  - Percy E. Moore
NW Ontario
KIVALLIQ REGION OF NUNAVUT
Regional Discharge Planning Coordinator
WRHA Aboriginal Health Programs-Health Services (AHP-HS)

• assists in the coordination of a safe and appropriate discharge plan that is suitable to patients care needs.

• Provides advocacy, guidance and support to the Multi-Disciplinary Team, the Patient and Family, Community Health Programs, First Nation Programs and other service or supports that may be required to participate in the care plan.
Palliative Care Discharge Challenges

• Variable availability of community health programs
• Support for Caregiver/s varies
  – Home care workers may be in difficult position of providing care to relatives
• NIHB or Other Coverage – often does not match provincial coverage
• Medication Storage, Management and Administration
• Jurisdictional – uncertainty RE funding responsibilities
• Socio-Economic
• WRHA bed utilization pressures
• Interpretation/Translation
Working Group

• Working group started in 2011
• Representatives from Palliative Care, Aboriginal Health Services and Home Care
• Began with First Nations people being discharged within WRHA
• Evolved to discuss discharges outside of WRHA
• Built on experience with pediatric patients.
Tool Development

• Learned from every discharge – shared experiences

• Group had clear vision of what we wanted to see
  – Some of us lacked knowledge about the system and life in remote communities

• Invited to attend meeting with Four Arrows RHA
  – Community members shared stories about caring for residents
  – Shaped our vision and commitment to continue work
Clinical Considerations As Death Nears

1. Management of existing symptoms and medical conditions in the context of changing priorities, functional capabilities, and ability to take medications

2. Anticipating and addressing new symptoms that might arise in the final days (typically dyspnea, congestion, agitated delirium)

3. Accessing supplies and medications and ensuring availability, safe storage and disposal

4. Anticipating concerns of family and addressing emotional wellbeing and physical capabilities of caregivers

5. After-death details
Predictable Challenges As Death Nears In Progressive Terminal Illness

• Functional decline – 100%
  – mobility (risk of falls), toileting, hygiene, etc.
• Decreased intake (food, fluids, meds) – pretty much 100%
• Congestion: reported as high as 92%
• Delirium: 80% +
• Families who would be grateful for support and information: must be near 100%

When these issues arise at end-of-life, things haven’t “gone wrong”… they have gone as they are inclined to.
Role of the Health Care Team

1. **Anticipate** predictable challenges

2. **Communicate** with patient/family

3. **Formulate** a plan for care
Role of the Health Care Team

1. **Anticipate** changes and challenges

2. **Communicate** with patient/family regarding potential concerns:
   - What can we expect? How long can this go on?
   - Not eating/drinking; sleeping too much
   - How do we know they are comfortable?
   - Are medications making things worse?
   - Would things be different elsewhere?

3. **Formulate** a plan for addressing predictable issues, including:
   - Health Care Directive / Advance Care Plan, *particularly addressing*:
     1. artificial nutrition and hydration
     2. treatment of life-threatening pneumonia at end of life
     3. expectations RE: transfer out of community
   - Medications by appropriate routes for potential symptoms
Specific Considerations in Remote Communities

- ensuring comfort during transportation
- connecting with community health care providers RE care plan
- agreement among family/community members for a palliative approach?
- family/community resources for supporting care in home
- health care providers and home support staff may find themselves having to provide care for dying relatives
- nursing support may not always be available 24/7
- medication availability, refills, safe storage, disposition
- is there a clear plan once death occurs?

impact of a death on family and community – communal loss
Tools

3 key components:

1. Guideline
2. Care Plan
3. Checklist
1. Guideline

Intended to be a reference when planning discharge for First Nations patients who want to return to their home community for palliative care.

- In cases where death is imminent – not all steps will be followed
- There will be barriers that may make discharge impossible
Discharge Planning Meeting, including:

- Patient/family

- WRHA care team
  - aboriginal health
  - palliative care program
  - hospital unit staff

- Community team(s)
  - Home and Community Care
  - MD for community
  - Nursing Station/Community Health Centre staff,
  - Band representatives, Elders, RHA Pall Care Coord
Discharge Planning Meeting

• Prior to meeting- call Nursing Station to see if they are aware of plans to return
• Review of the patient’s illness, course of care in facility and approach to care when returning home:
  – Diagnosis
  – Prognosis
  – Whether or not patient/family/community would consider transfer back to WRHA or if goal is to remain in home community
Discharge Planning Meeting

• If the discharge plan includes withdrawal of life-sustaining treatment – plan of care needs to be reviewed with WRHA Palliative Care Program Directors

• May be factors identified during planning that make discharge home impossible
  – Safety for patient, family and care team
  – Environmental factors that will not support care plan
Discharge Planning Meeting

*Review patient’s medical condition & goals of care*
  - Ensure that everyone is aware of plan as we move forward

*Equipment*
  - Is it available, accessible and who is responsible for obtaining

*Oxygen*
  - Is it available, accessible and who is responsible for obtaining
Discharge Planning Meeting

Medications –

• Who will primary prescriber be? At discharge and ongoing?
• Which pharmacy provider will be involved?
• How will medications be dispensed? Is nursing station prepared to assist?
• How/where will medications be stored?
• Who will be responsible for administering medications?
• Will there be resources available to help prepare medications? – e.g. syringes
• What will family/caregivers need to know about medications?
Discharge Planning Meeting

Care in the home –

• What services are available in community?
• Is training required?
• What support is available?

Documentation completed –

• Letter of anticipated death – completed and sent to Medical Examiner and law enforcement agency for community
• Health Care Directive or Advance Care Plan
Discharge Planning Meeting

*Transportation to home community approved and arranged*-  
- Arrangements must be made for transportation from “bed in WRHA facility to bed in home community”  
- Can patient travel by commercial airline? If not, life flight will need to be arranged.  
- If by air – need to discuss transport after landing to home; may need boat ride, stretcher-capable vehicle  
- Care needs need to be considered during entire journey including oxygen, medications and contingency plans in case of weather delay
Discharge Planning Meeting

*Plans for care after death reviewed-*

- Does the community use a funeral home or is burial on site?
- Notification of law enforcement and Medical Examiner
- How to dispose of/return medications?
- Availability of Nursing Station/Community Health Center staff at time of death?
- What support is available for family, community care team
Discharge Planning Meeting

**Contact information documented and shared**-

- Nursing Station/Community Health Center
- Home and Community Care team
- MD
- Pharmacy
- Other care providers – e.g. oncologist
- Regional Palliative Care Coordinator
- WRHA Palliative Care program
- WRHA Aboriginal Health Services
- Canadian Virtual Hospice
2: Care Plan

• Developed & shared with everyone involved in care in the community including patient/family and WRHA staff
Care Plan

• Template developed that summarizes information discussed in meeting:
  – Patient demographic information
  – Review of medical history
  – Summary of the overall approach to care
  – Scheduled and prn medications at time of discharge
  – Potential symptoms, pharmacological and non-pharmacologic management
Care Plan

• Proposed schedule for:
  – nursing assessments
  – home and community care team
  – family to provide care - Including specific information about things family can expect to do

• List of equipment required
Care Plan

- Information about procedures i.e. dressing changes, line care
  – including frequency, supplies required, how to reorder
- Information about medications and medication safety
- Health care team contact information
3: Checklist

- developed to guide team and provide easy reference for steps to follow.

What have we learned?

- Need to have preliminary call with Nursing Station/Home and Community care before meeting
- Involving FNIHB staff to assist
- Plans may change quickly- keep options open
- Planning takes time
- What if discharge is not possible?
- Engagement of Aboriginal Health Services and Palliative Care Program is essential
- Teleconference with as many parties involved is key
  - Expand use of telehealth for meetings
Feedback

• Care plans well received – need to make sure families understand to contact nursing station for help
• Developing relationships with teams in communities
• Communities appreciate support from WRHA Palliative Care Program
• Northern Connections (community primary care clinic focused on supporting urban First Nations patients) – want to be involved in supporting discharge plans
Moving Forward

• Tools have been modified to be consistent with resources available for Nunavut patients
• Education sessions planned to support tool use
  – Regional Utilization team
  – Senior Leadership at Sites
• Model discharge planning so site teams can take the lead
• Share tools
• Learn from our experiences and others
